

Newtown Packaging Install Baysek C190 Die Cutter

A Baysek C190 automatic die cutter has been installed at Newtown Packaging, an independent corrugated converter based in the UK. Founded in 1977, Newtown has successfully traded for over 40 years to become one of the UK's leading adhesive tape and packaging suppliers. Based in Redditch, Worcestershire, Newtown have their own design, manufacturing, and logistics facilities all under one roof. The new addition of the Baysek C190 die cutter will bring a wealth of opportunity and growth.

“The installation was quick and very efficient. Baysek’ technicians were extremely professional, and offered first-class training

to our operators. The service and support we have received has been second to none, we would recommend Baysek to anyone”, said Luke Verrall.

The Baysek die cutting method removes the need to manually strip waste from die cut work, thanks to the machines pneumatic waste extraction

hood, leaving finished units free of waste and paper dust no matter how difficult or intricate the job. Up to 60,000 pieces per hour can

be achieved with a multitude of substrates, all with just one operator. The C190 automatic die cutter has a maximum sheet size of 1400mm (L) x 1900mm (W). Large one-outs, more complex work, and multiple outs up to 60 individual pieces per cycle are easily handled. The Finished parts exit the machine already counted and stacked, and immediately ready for shipping, saving both time and additional labour costs.
